

**LSC Scientific Committee  
13<sup>th</sup> Meeting**

**November 28-29, 2013  
Canfranc Estación, Spain**

**Summary, Conclusions and Recommendations**

The committee was pleased with the overall progress being made in the past 6 months at the laboratory. It was particularly pleasing to see scientific results coming from several of the projects. For example, there are interesting new information on non-linear tides, data which are changing the design for the plans for the SuperNEMO project and data which have impact on the SuperK-Gd project. The committee is also very pleased to learn of the European support received my NEXT which will enable this important project to proceed. The laboratory also hosted an important international school in particle astrophysics. 37 students from 10 countries attended.

*The Committee continues to support the efforts of Professor Bettini who has done an outstanding job in managing the Laboratory and overseeing the installation of the experiments and infrastructure. He has applied strong leadership in accomplishing the stated goals. The Laboratory Organization and Execution plan is being carried out in a timely manner*
